 bottoms of the graph. As the number of customers increases, the total revenue also increases. However, the marginal revenue begins to decrease as the firm approaches the point of saturation. This is because the additional customers are bringing in less revenue per customer due to increased competition.

A company can determine its optimal output level by finding the point where the marginal revenue equals the marginal cost. This is known as the profit-maximizing output level. At this point, the company is maximizing its profits.

draw on the shape of the demand curve. As demand increases, the demand curve shifts to the right, indicating an increase in the price that customers are willing to pay. Conversely, as demand decreases, the demand curve shifts to the left, indicating a decrease in the price that customers are willing to pay.

The revenue generated from each additional unit of output is known as the marginal revenue. The marginal revenue is the change in total revenue divided by the change in output. It represents the additional revenue generated by producing one more unit of output.

demands for its product. The company can increase its prices and still sell all of its output at the new price level. This is known as the elastic demand curve.

price elasticity of demand (PED)

defined as the percentage change in quantity demanded divided by the percentage change in price. The PED is calculated as:

PED = \frac{\text{Percentage change in quantity demanded}}{\text{Percentage change in price}}

If the PED is greater than 1, the demand is considered to be elastic, meaning that a small change in price will result in a large change in quantity demanded. If the PED is less than 1, the demand is considered to be inelastic, meaning that a small change in price will result in a small change in quantity demanded.

The graph shows the relationship between price and quantity demanded for a given product. The demand curve slopes downward, indicating that as price increases, the quantity demanded decreases. The curve is elastic in the lower part of the graph, indicating that a small change in price will result in a large change in quantity demanded. The curve is inelastic in the upper part of the graph, indicating that a small change in price will result in a small change in quantity demanded.

The demand curve is upward-sloping because as price increases, the marginal utility of income decreases. The marginal utility of income is the additional satisfaction received from an additional unit of income. As the price of a good increases, the marginal utility of income decreases because consumers can purchase fewer other goods with the additional income. This leads to a decrease in the quantity demanded for the good.

The demand curve is downward-sloping because as the price of a good increases, the marginal utility of income decreases. The marginal utility of income is the additional satisfaction received from an additional unit of income. As the price of a good increases, the marginal utility of income decreases because consumers can purchase fewer other goods with the additional income. This leads to a decrease in the quantity demanded for the good.

The demand curve is upward-sloping because as the price of a good increases, the marginal utility of income decreases. The marginal utility of income is the additional satisfaction received from an additional unit of income. As the price of a good increases, the marginal utility of income decreases because consumers can purchase fewer other goods with the additional income. The True Islam

By Danyal Saleem

Published in Weekly Urdu Digest (Page 2)

Nasiruddin Khan, a former editor of The Hindu, has launched a campaign in The True Islam to highlight the importance of peace and harmony in today's world. He has said that people should respect each other's beliefs and cultures.

"We should not let our differences divide us," he said. "We should work together for a better future."

2017 - 2018, the security situation in Honduras was critical. The President of the country, Juan Orlando Hernandez, was accused of corruption and money laundering. However, despite these challenges, the country continued to grow economically.

In 2017, the GDP of Honduras grew by 0.9%, but in 2018 it decreased to 0.1%. The country's main exports are bananas, coffee, and cocoa. Despite this, poverty and unemployment remain high. In 2018, the poverty rate was 44.9%, and the unemployment rate was 9.7%.

The security situation in Honduras is characterized by violence and crime. In 2018, there were 12,422 reported violent crimes, of which 7,972 were robberies, 2,435 were thefts, and 1,466 were murders.

The country's main challenges are poverty, crime, and violence. These issues affect the country's economy, social stability, and the well-being of its citizens. The government has taken steps to address these issues, but much work remains to be done.
